

## ACKNOWLEDGEMENTS

The name of Dr. Thomas R. Saving influenced my decision to come to Texas A&M University and since then I decided to write a dissertation under his supervision. I am deeply grateful to Dr. Thomas R. Saving for his guidance, criticism and encouragement during the development of this dissertation and during the course of my graduate study. His generous help and suggestions extend to my wife as well, even though she is not a student at this university. Words are inadequate to express the debt I owe him.

I would like to express my sincere appreciation to the other committee members, Dr. S. Charles Maurice, Dr. Arthur S. DeVany, and Dr. Peter S. Rose for their interest and encouragement. I wish to acknowledge the help, encouragement and friendship given me by Susan Alexander, Shirley Gresham, Chao-Cheng Mai, Werayut Nitakorn, Billie Ribbe, Yeung-Nan Shieh and Sumrit Torkungval.

My gratitude also extends to the Fulbright Foundation, Eastern Illinois University and Texas A&M University which provided scholarships during my study in the U.S. Since these institutions are partially funded by the U.S. Government, my gratitude extends to all American people.

I acknowledge a special debt of gratitude to Mr. Padech and Mrs. Jittima Nitisiri, my parents-in-law, and Mr. Narong and Mrs. Vichitra Sachchamarga, my parents, whom

this dissertation is dedicated to, for their love, understanding and encouragement.

My warmest appreciation, however, is reserved for my wife Sukrita, who was instrumental in my decision to study for the doctoral degree. I express my very special thanks to her for her love, understanding and moral support during my graduate program.
