

ACKNOWLEDGMENTS

The author wishes to express his profound gratitude to his advisor, Associate Professor Dr. Somnuk Tangtermsirikul, for the invaluable advice, guidance and consistent encouragement that he provided throughout the duration of this research. The author falls short of words while paying gratitude to him for the patience he observed during correcting the mistakes, and the parent like behavior he extended to him during the entire period of his studies at SIIT. This work could never have been accomplished without his outstanding guidance. The author is also truly grateful to his advisor and Sirindhorn International Institute of Technology, Thammasat University for offering the financial support in form of teaching and research assistance.

Sincere gratitude are also due to committee member, Assoc. Prof. Dr. Burachat Chatveera, and external committee member, Assoc. Prof. Dr. Suvimon Sujjavanich, for devoting their valuable time to serve as members of the Examination Committee. Sincerest appreciation goes to Dr. Suvimon for providing a number of invaluable references.

Thanks are expressed to the Electricity Generating Authority of Thailand (EGAT) and The Concrete Products and Aggregates Co., Ltd. for granting fly ash used in this research.

Honest thank is also conveyed to Mr. Pongsak Jitvutthikai, Mr. Kritsada Sisomphon, Master Degree student, Mr. Raktipong Sahamitmongkol and Mr. Chanin Usanawasin for numerous information and their effort to complete his thesis.

Special thanks are also given to the secretaries of the Civil Engineering Program, Sirindhorn International Institute of Technology, Ms. Suwanna Punyadee and Ms. Cholthicha Pradidkwan for all their helps.

Finally, the author would like to dedicate to his parents for their tenderness and encouragement for his study and best support in all of his life.
