

List of Figures

	Figure Title	Page
2.1	Two possible situations of the on-line i^{th} generating unit	5
3.1	$16 \times (N-1)$ bit concatenated encoding scheme	7
3.2	Tournament selection	9
3.3	Uniform crossover	10
3.4	Mutation	10
3.5	Perturbation	12
3.6	Zoom feature	15
3.7	Flow chart of ZBF method for constrained ED problem	17
3.8	Flow chart of ZDP method for constrained ED problem	20
3.9	Flow chart of GA-SA for constrained ED problem	23
4.1	The generator fuel cost curves of RY_CC#1-4, BPK_T#1-4, KN_CC and IPT_CC generating units	26
4.2	The incremental cost (IC) curves of RY_CC#1-4, BPK_T#1-4, KN_CC and IPT_CC generating units	26
4.3	EGAT daily load curve scaled for the 20 generating unit system	26
4.4	Convergence comparison of the 80 generating unit system with 30,000 MW load demand	28
4.5	The total fuel cost of 10 different seed numbers of CGSA, GA-SA, SA and LS for 10 generating unit system with monotonically increasing load demand	30
4.6	Comparison of CPU times per load demand	30
A	The B-matrix coefficients for 10 generating unit system	33
