

LIST OF FIGURES

Figure	Title	Page
1.1	Carre' continuous absorption machine. <i>A</i> : boiler, <i>B</i> : condenser <i>C</i> : evaporator <i>D</i> : absorber <i>E</i> : a solution heat exchanger and <i>F</i> : a header tank for cooling water [Gosney, 1982].	2
1.2	a) absorption process and b) refrigerant separation process.	3
1.3	Vapor absorption refrigeration cycle.	4
1.4	A schematic diagram of the Yazaki system vapor absorption cycle.	5
1.5	A schematic diagram of DAR.	6
2.1	A simple set-up of a bubble-pump.	9
2.2	A schematic diagram of a diffusion absorption refrigeration cycle.	10
2.3	A schematic diagram of the integrated 3X-boiler DAR.	11
3.1	A photograph of the experimental set-up.	17
3.2	Schematic view of the experimental refrigerator.	18
3.3	A set up used to prepare ammonia-water solution.	25
4.1	A photograph of the bubble pump set-up.	28
4.2	A schematic diagram of the bubble-pump test rig.	29
4.3	Effect of tube diameter on pumping performance of bubble pump.	31
4.4	Effect of tube length on performance of bubble-pump.	32
4.5	Effect of head ratio on performance of bubble pump.	33
4.6	Performance of the bubble-pump used in the experimental refrigerator.	34
5.1	Schematic view of the experimental refrigerator.	37
5.2	P-T-X-h diagram of aqueous ammonia solution for the processes related to the model.	38
5.3	A calculation flow chart of the mathematical model.	41
6.1	Cooling effect of the system with variation of input heat at the generator.	50
6.2	COP of the system with variation of input heat.	50
6.3	Calculated VS actual solution flow rate at various heat input.	52
6.4	Cooling capacity with variation of heat input at various helium charge pressure.	55

Figure	Title	Page
6.5	COP with variation of heat input at various helium charge pressure.	55
6.6	Generator and separator's process on P-T-X-h diagram.	58
6.7	Comparison of experimental and calculated cooling capacity with variation of rectification temperature.	59
6.8	Comparison of experimental and calculated COP with variation of rectification temperature.	59
