

## Acknowledgements

There are many people who are responsible in some way for my successful completion of master's degree program here at Sirindhorn International Institute of Technology. I wish to acknowledge the support each has shown me through my four-year study.

None deserves more credit than my advisor, Prof. Sawasd Tantaratana. I wish to sincerely thank him for his patience, constant encouragement, and continuous technical advice and guidance throughout my study. He has also provided me with computer equipment and some financial support. He has always allowed a maximum of flexibility and freedom in choosing research topic. Without a doubt, I have benefited tremendously from his research experience, his unique attitude, and his keen discussion. I am very grateful to him for all the hours spent discussing my thesis. I have also deeply appreciated his tireless dedication to correct and improve the readability of this thesis. It couldn't be successful to accomplish the work without him.

I would like to thank members of my committee: Assoc. Prof. Banlue Srisuchinwong and Asst. Prof. Prinya Tantaswadi who readily agreed to serve on my committee and always showed interest in my work. I have also appreciated their kindness, patience, comments, and suggestions.

I am indebted to Assoc. Prof. Kazi M. Ahmed, who served as the external examiner, for his time and effort in reading this work and providing invaluable comments and suggestions.

I would also like to thank Asst. Prof. Waree Kongprawechnon for her encouragement, friendship, and suggestions every time I met her.

I am deeply grateful to Taweesak Samanchuen who was my mentor throughout my academic pursuit for his invaluable comments, discussions, and suggestions. Discussions with him were very pleasant, enjoyable, and enlightening. His suggestions usually were correct. Also, he showed me the attitude of a researcher, who thinks about the problem through the day and the night and never gives up and surrenders.

I would like to express my gratitude to other colleagues in Electrical Engineering Program for their kindness, assistance, suggestion, and friendship. I would like to thank Thanyapat Sakunkonchak and Charoen Tangtrongbenchasil for all their help in computer and software issues. I would like to acknowledge Yod Sukamongkol, Adisorn Leelasantitham, and Niramom Ruangpayoonsak; they allowed me to use their computers for obtaining the simulation and analytical results. I would also like to thank Wichai Pongwilai for sharing his knowledge.

I am also grateful to the secretaries and technician of Electrical Engineering Program, past and present: Gulnapa Sarigkaganond, Saychon Kongchan, Nattaraporn Udomprasertkul, Artcharaporn Uthawung, Warat Huangching, who have been always happy to help and provide everything I requested.

In addition, I would like to acknowledge my partially financial support from the Telecommunications Consortium of the National Science and Technology Development Agency (NSTDA), Thailand.

Finally, my sincere gratitude goes to my family for their love, constant encouragement, and financial support throughout my long time study. I am deeply indebted to my parents for teaching me the importance of hard work and perseverance. I would like to thank my brother, sister, and sister-in-law for the encouragement they have always provided. I very much appreciate all sacrifices they made for me. Without them, what I have accomplished would have been impossible and meaningless.
