

ACKNOWLEDGEMENTS

First, I would like to express my sincere thank to my Ph.D. advisor, Dr.Suebsak Nanthavanij, for everything since the beginning of my study through many years of wonderful research experience. I am indebted to his ongoing advice and support particularly in helping me choosing my research topic, guiding my studies, correcting and actually rewriting my manuscripts for journal submission. He will always be a shining star in my heart.

I am grateful to every useful comment and suggestion from my committee members, which are Dr.Pisal Yenradee, Dr.Ruengsak Kawtummachai, and Dr.Junalux Chalidabhongse. Their advice has always been helpful to my works.

Many thanks go to Dr.Jian Yang from NJIT who supervised my 5-month research at NJIT during June to November 2005. I have learnt many important techniques in Operations Research from him.

I would like to express my appreciation to Dr.Joseph Leung from NJIT for being my external examiner, reviewing my dissertation, and providing valuable comments.

I would like to thank Dr.Somrote Komolavanij, the head of Management Technology program, for allowing me to use the computers at MT computer lab for two weeks. Without the superb computer facility, I would have spent more than 3 months for running the time-consuming experiments.

I wish to express my gratitude to the Thailand Research Fund for providing the financial support for my research study through the Royal Golden Jubilee scholarship (RGJ-PHD grant No. PHD/0138/2544).

Last but not least, I would like to thank my father and my mother for always encouraging me to study hard and be a better person. Without their greatest love and continuous support, I never would have become who I am today. Words can never express how much I appreciate all that they do.
