

List of Figures

Figure	Page
2.1 A conventional coherent serial search scheme.....	4
2.2 A conventional noncoherent serial search scheme.....	4
2.3 A noncoherent parallel search scheme.....	5
2.4 A PN acquisition using PN matched filter.....	6
2.5 A rapid acquisition by sequence estimate.....	7
2.6 A closed-loop coherent PN acquisition scheme for DS/SS systems using an auxiliary signal.....	9
3.1 The proposed noncoherent PN acquisition scheme.....	13
3.2 The periodic cross-correlation $R_{ca}(\beta)$	14
3.3 The periodic cross-correlation $R_{cx}(\beta)$	15
3.4 The VCC loop discriminator characteristic.....	19
3.5 Flowchart of the simulation program for the proposed noncoherent scheme.....	24
3.6 Mean acquisition time of the proposed scheme.....	25
3.7 Variance of the acquisition time of the proposed noncoherent scheme.....	25
3.8 Ratio of the mean acquisition time of the conventional noncoherent serial scheme to that of the proposed scheme.....	26
3.9 Ratio of the variance of the acquisition time of the conventional noncoherent serial scheme to that of the proposed scheme.....	26
4.1 Waveform of the auxiliary signal used in [25] where $N = 127$	27
4.2 Waveform of a signal $x_1(t)$ where $N = 127$	28
4.3 The new auxiliary signal waveform where $N = 127$	30
4.4 The periodic cross-correlation $R_{cx_2}(\beta)$	30
4.5 The proposed coherent scheme.....	31
4.6 The VCC loop discriminator characteristic.....	33
4.7 Flowchart of the simulation program for the proposed coherent scheme.....	39

4.8	Mean acquisition time of the proposed coherent scheme.....	40
4.9	Variance of the acquisition time of the proposed coherent scheme.....	40
4.10	Ratio of the mean acquisition time of the conventional coherent serial scheme to that of the proposed scheme.....	41
4.11	Ratio of the variance of the acquisition time of the conventional coherent serial scheme to that of the proposed scheme.....	41
B.1	The probability density function of $f_{s_i}(x j, \gamma)$ at various conditions.....	48
C.1	The periodic auto-correlation function $R_{cc}(\beta)$	50
C.2	The periodic auto-correlation function $R_{cg}(\beta)$	50
