

List of Figures

Figure	Page
2.1 Conventional MRP block diagram	5
2.2 An algorithm of Closed-loop MRP system	6
2.3 An algorithm of Manufacturing Resources Planning (MRP II)	6
2.4 Features on ERP and ERP II systems	7
2.5 Push System	9
2.6 Pull System	9
3.1 The current practice of Kulthorn Kirby Co., Ltd.	26
3.2 The current practice of Kulthorn Universal Co., Ltd.	29
3.3 The current practice of Siam Inter Pacific Co., Ltd.	32
3.4 The current practice of Siam Kubota Co., Ltd.	34
3.5 The current practice of Thai Hygiene Products Co., Ltd.	36
4.1 Features on TSPICs	43
4.2 The screen for assigning username and password	45
4.3 The screen for assigning permission	45
4.4 The screen of customer profiles	47
4.5 The screen of product profiles	47
4.6 The screen for entering bill of material	48
4.7 Multi-level BOM preview	48
4.8 The screen of lot number control	49
4.9 The screen for generating the work calendar	50
4.10 The screen for creating the holidays	50
4.11 The screen for entering the work station profile	51
4.12 The screen of product routing	52
4.13 The screen for entering the forecast order	53
4.14 The screen for entering the customer order	53
4.15 The screen of deliver to customer	54
4.16 The example of Invoice	54
4.17 The example of Purchase order	55
4.18 The screen for placing purchase order	56
4.19 The screen for receiving the purchase order	56
4.20 The screen for placing the work order	57
4.21 The example of work order paper	57
4.22 The screen for receiving the work order	58
4.23 The screen for withdrawing material to process	59
4.24 The screen of WIP returns with WO number	60
4.25 The screen of WIP returns without WO number	60
4.26 The screen of on-hand adjustment	61
4.27 The example of production plan	62
4.28 The example of purchasing plan	62
4.29 The screen of Finite Capacity Scheduling	63
4.30 The example of finite capacity scheduling	64
4.31 The screen for generating the stock card	64
4.32 The example of the stock card report	65

4.33 The example of stock valuation report	65
4.34 The topics of management reports	66
4.35 Diagram of information relationship	67
4.36 Transaction relationships in TSPICs	69
4.37 TSPICs Implementation Plan	71
5.1 Structure of manufacturing process	75
5.2 Block diagram of NFCMRP system	77
5.3 Load profile on work centers obtained from SD method and ERT rule	79
5.4 Load profile on work centers after allocating excess orders to the second priority work center	80
5.5 Flowchart for adjusting timing of operations to eliminate capacity problem	81
5.6 Example of ML-Start Early and MR-Delay Operation methods	82
5.7 Conflict between due time of item C and release time of item A	83
5.8 Example of revising the production and purchasing plans	84
5.9 Interaction between scheduling and adjusting options on total overtime	88
5.10 Interaction between scheduling and adjusting options on total tardiness	88
5.11 Load profile on bottleneck work center (work center 15)	91
5.12 Load profile on non-bottleneck work center (work center 20)	91
6.1 Block diagram of OFCMRP system	94
6.2 Load profile on the first priority work center	95
6.3 Load profile on work center after allocating excess operation to second priority work center	95
6.4 An example for illustrating the dispatching rules	96
6.5 Precedence relationship between work centers	98
6.6 An algorithm of F scheduling system	101
6.7 An algorithm of FB scheduling system	102
6.8 Interaction between OFCMRP systems and dispatching rules on total earliness	106
6.9 Interaction between OFCMRP systems and dispatching rules on number of early orders	107
7.1 Block diagram of IMFCMRP and OFCMRP systems	110
7.2 Example of eliminating the earliness	111
7.3 Example of reducing the tardiness	112
7.4 Interaction between dispatching rules and FCMRP methods on total earliness	115
7.5 Interaction between dispatching rules and FCMRP methods on total overtime	115
7.6 Load profile on bottleneck work center no. 15 of IMFCMRP and OFCMRP	116
7.7 Load profile on non-bottleneck work center no. 20 of IMFCMRP and OFCMRP	116
