

## ACKNOWLEDGEMENTS

The author wishes to express his profound gratitude to his advisor, Assoc. Prof. Pruetha Nanakorn, for his valuable guidance, advice and continuous encouragement throughout the study period.

The author wishes to extend his sincerest appreciation to Assoc. Prof. Somnuk Tangtermsirikul and Asst. Prof. Boonchai Satitmannaitam for their useful advices and for serving as the members of his examination committee. The author is grateful to all faculty members of Sirindhorn International Institute of Technology and Faculty of Engineering, Thammasat University for their lectures.

Outstanding acknowledgements are due to the SIIT-FOE Joint Master's Degree Program in Civil Engineering for providing the scholarship. The author is also grateful to his advisor for providing additional financial support in the form of research assistantship under his research project funded by the Thailand Research Fund (TRF). All of these supports made this study possible.

Special thanks are also due to Mr. Aruz Petcherdchoo and Mr. Preecha Soparat for their suggestions, helps and useful programming techniques as well as to Mr. Nont Nimityongskul for his helps in the preparation of this thesis. Moreover, a lot of thanks are extended to all of the author's friends and seniors for their helps and inspirations.

Sincere appreciations are given to the secretaries of the civil engineering program, Sirindhorn International Institute of Technology for their cooperation during this study.

Finally, the author wishes to express his deep appreciation to his parent and his brother for their tremendous sacrifices and support during this study.
