

## TABLE OF CONTENTS

	PAGE
<b>TITLE PAGE</b>	i
<b>ACKNOWLEDGEMENT</b>	ii
<b>ABSTRACT</b>	iii
<b>TABLE OF CONTENTS</b>	iv
<b>LIST OF FIGURES</b>	vi
<b>LIST OF TABLES</b>	viii
<b>CHAPTER 1 INTRODUCTION</b>	1
1.1 General	2
1.2 Literature Review	4
1.2.1 Along-wind building response	4
1.2.2 Across-wind building response	5
1.2.3 Vibration controls	7
1.3 Objective of Study	9
1.4 Assumption of Study	10
<b>CHAPTER 2 WIND EFFECT ON BUILDING</b>	11
2.1 Specified Wind Load	11
2.1.1 Reference velocity pressure $q$	11
2.1.2 Exposure factor $C_e$	11
2.1.3 Gust effect factor $C_g$	12
2.1.4 Pressure coefficient $C_p$	14
2.2 Wind Induced Building Motion	14
2.3 Allowance of Response	16
2.4 Vibration Controller Application	16
<b>CHAPTER 3 DESIGN OF TUNED MASS DAMPER AND MULTIPLE TUNED MASS DAMPERS</b>	24
3.1 Tuned Mass damper	24
3.1.1 Mathematical model and equation of motion	24
3.1.2 Complex frequency response	25
3.1.3 Equivalent damping ratio	26
3.1.4 Optimal equivalent damping ratio	27
3.1.5 Displacement of TMD mass	27
3.1.6 Effect of complex frequency response on equivalent damping ratio	28
3.2 Multiple Tuned Mass Dampers	29
3.2.1 Mathematical model and equation of motion	29
3.2.2 Complex frequency response	30
3.2.3 Equivalent damping ratio	30
3.2.4 Robustness on natural frequency error	31
3.2.5 Robustness on critical damping ratio error	31
3.2.6 Optimal equivalent damping ratio	31

	<b>PAGE</b>
<b>CHAPTER 4 DESIGN OF TUNED LIQUID DAMPER AND MULTIPLE TUNED LIQUID DAMPERS</b>	<b>38</b>
4.1 Tuned Liquid Damper	38
4.1.1 Mathematical model and response	38
4.1.2 Optimum damping ratio	38
4.1.3 Effect of harmonic frequency response on equivalent damping ratio	39
4.1.4 EXCEL computer program for design TLD	39
4.2 Multiple Tuned Liquid Dampers	40
4.2.1 Mathematical model and response	40
4.2.2 Robustness on natural frequency error	41
4.2.3 Optimal equivalent damping ratio	41
<b>CHAPTER 5 DESIGN OF ACTIVE TUNED MASS DAMPER</b>	<b>45</b>
5.1 Mathematical Model and Equation of Motion	45
5.2 The Controller	45
5.3 Complex Frequency Response	46
5.4 Equivalent Damping Ratio	47
5.5 Optimal Equivalent Damping Ratio	47
5.6 Stability Analysis of ATMD Design	48
5.7 Displacement and active force of ATMD	48
<b>CHAPTER 6 NUMERICAL EXAMPLES</b>	<b>51</b>
6.1 Response of Building without Vibration Control	51
6.2 Design of Passive Vibration Controls ( $\mu=0.01$ )	52
6.3 Effects of Passive Vibration Controls on Reduction in Wind Load and Response ( $\mu=0.01$ )	52
6.4 Design of TMD and TLD ( $\mu=0.03$ for 317.5 m and 400 m High Buildings)	54
6.5 Effects of TMD and TLD on Reductions in Wind Load and Response ( $\mu=0.03$ for 317.5 m and 400 m High Buildings)	55
6.6 Effects of TMD Mass Ration	55
6.7 Design of Active Vibration Control ( $\mu=0.03$ for 317.5 m and 400 m High Buildings)	56
6.8 Effects of Active Tuned Mass Damper on Reductions in Wind Load and Response ( $\mu=0.03$ for 317.5 m and 400 m High Buildings)	56
6.9 Effects of Feedback Control	57
<b>CHAPTER 5 CONCLUSIONS</b>	<b>74</b>
