

LIST OF FIGURES

FIGURE	PAGE
2.1 Forces acting on the joint zone	6
2.2 Mechanism of forces transmitted within a joint	6
3.1 Typical non-seismic reinforcing detail of RC frame designed for gravity load only	18
3.2 Geometries of beam-column frame	20
3.3 Interior Beam-Column Subassemblages	24
3.4 Determination of effective joint width (b_j)	24
3.5 Definition of column tributary area	25
3.6 Relation between column sectional area and column tributary area	26
3.7 Relation between column depth to bar diameter ratio (h_c/d_b) and square root of column tributary area	26
3.8 Relation between bond index and square root of column tributary area	26
4.1 Reinforcing details in joint region of specimen JB, JS, JM and JL	28
4.2 Reinforcing details in joint region of specimen JM, JB, JD and JP	29
4.3 Reinforcing details in joint region of specimen JM, JB, JR and JT	30
4.3 Reinforcing details in joint region of specimen JM, JT, JA and JP	32
4.5 Dimension and reinforcing details of specimen JM	36
4.6 Dimension and reinforcing details of specimen JB	37
4.7 Dimension and reinforcing details of specimen JD	37
4.8 Dimension and reinforcing details of specimen JR	38
4.9 Dimension and reinforcing details of specimen JT	38
4.10 Dimension and reinforcing details of specimen JP	39
4.11 Dimension and reinforcing details of specimen JA	39
4.12 Dimension and reinforcing details of specimen JS	40
4.13 Dimension and reinforcing details of specimen JL	40
4.14 Diagram of moment distribution in frame building and in specimen	41
4.15 Experimental Set-up	41
4.16 Setup of experimental program	42
4.17 Displacement history of all specimens	44
4.18 Set-up of Measuring Instrument	46
4.19 Measurement for column rotation	46
4.20 Measurement for beam rotation	46
4.21 Measurement for column shear angle	47
4.22 Measurement for beam shear angle	47
4.23 Measurement for joint shear angle	47
4.24 Measurement for rocking angle	47
4.25 MTS Actuator for column shear force	47
4.26 Shear deformation & calculation on any zone of member	48
4.27 Rotation angle & calculation on any zone of member	49
4.28 Rocking angle & calculation on any zone of member	49
4.29 Position of transducer gages for measuring deformation of all specimen	59
4.30 Position of strain gages on longitudinal bar of Debonded specimen	60
4.31 Position of strain gages on transverse bar of Debonded specimen	61
4.32 Position of strain gages on longitudinal bar of Diagonal specimen (JD)	62
4.33 Position of strain gages on transverse bar of Diagonal specimen	63

LIST OF FIGURES

FIGURE		PAGE
4.34	Position of strain gages on longitudinal bar of Special joint transverse specimen (JT)	64
4.35	Position of strain gages on transverse bar of Special joint transverse specimen (JT)	65
4.36	Position of strain gages on longitudinal bar of Plate specimen (JP)	66
4.37	Position of strain gages on transverse reinforcement of Plate specimen (JP)	67
4.38	Position of strain gages on longitudinal bar of Spiral specimen (JA)	68
4.39	Position of strain gages on transverse reinforcement of Spiral specimen (JA)	69
5.1	Progression of cracking development of Debonded specimen (JB)	74
5.2	Progression of cracking development of Diagonal specimen (JD)	74
5.3	Progression of cracking development of Special joint transverse specimen (JT)	74
5.4	Progression of cracking development of Plate specimen (JP)	74
5.5	Progression of cracking development of Spiral specimen (JA)	74
5.6	Relation between column shear force and lateral drift ratio of Debonded specimen (JB)	78
5.7	Relation between column shear force and lateral drift ratio of Diagonal specimen (JD)	79
5.8	Relation between column shear force and lateral drift ratio of Special joint transverse specimen (JT)	79
5.9	Relation between column shear force and lateral drift ratio of Plate specimen (JP)	80
5.10	Relation between column shear force and lateral drift ratio of Spiral specimen (JA)	80
5.11	Column shear force and shear angle relation of specimen JB	85
5.12	Column shear force and shear angle relation of specimen JD	86
5.13	Column shear force and shear angle relation of specimen JT	87
5.14	Column shear force and shear angle relation of specimen JP	88
5.15	Column shear force and shear angle relation of specimen JA	89
5.16	Column shear force -rotation angle relation of specimen JB	90
5.17	Column shear force -rotation angle relation of specimen JD	90
5.18	Column shear force -rotation angle relation of specimen JT	91
5.19	Column shear force -rotation angle relation of specimen JP	91
5.20	Column shear force -rotation angle relation of specimen JA	92
5.21	Column shear force –rocking relation of Debonded specimen(JB)	92
5.22	Column shear force – rocking relation of Diagonal specimen (JD)	93
5.23	Column shear force –rocking relation of Joint transverse specimen (JT)	93
5.24	Column shear force –rocking relation of Plate specimen (JP)	93
5.25	Column shear force –rocking relation of Spiral specimen (JA)	93
5.26	Strain relation between left beam and right beam bar of Debonded specimen (JB)	98
5.27	Strains of bottom beam bar of Debonded specimen (JB)	99
5.28	Strains of top beam bar of Debonded specimen (JB)	99

LIST OF FIGURES

FIGURE		PAGE
5.29	Strains of main column bar of Debonded specimen (JB)	100
5.30	Strains of transverse beam bar column bar of Debonded specimen	100
5.31	Strain relation between left beam and right beam bar of Diagonal specimen (JD)	101
5.32	Strains of bottom beam bar of Diagonal specimen (JD)	101
5.33	Strains of top beam bar of Diagonal specimen (JD)	102
5.34	Strains of top beam bar of Diagonal specimen (JD)	102
5.35	Strains of transverse beam bar and column bar of Diagonal specimen (JD)	103
5.36	Strain relation between left beam and right beam bar of Joint transverse specimen (JT)	103
5.37	Strains of bottom beam bar of Joint transverse specimen (JT)	104
5.38	Strains of top beam bar of Joint transverse specimen (JT)	104
5.39	Strains of main column bar of Joint transverse specimen (JT)	105
5.40	Strains of transverse beam bar and column bar of Joint transverse specimen	105
5.41	Strains of joint transverse bar of Joint transverse specimen (JT)	106
5.42	Strains of joint transverse bar of Joint transverse specimen (JT)	106
5.43	Strain relation between left beam and right beam bar of Plate specimen (JP)	106
5.44	Strains of bottom beam bar of Plate specimen (JP)	107
5.45	Strains of top beam bar of Plate specimen (JP)	107
5.46	Strains of main column bar of Plate specimen (JP)	108
5.47	Strains of transverse beam bar and column bar of Plate specimen (JP)	108
5.48	Strains of joint transverse bar of Plate specimen (JP)	108
5.49	Strain relation between left beam and right beam bar of Spiral specimen (JA)	109
5.50	Strains of bottom beam bar of Spiral specimen (JA)	109
5.51	Strains of top beam bar of Spiral specimen (JA)	110
5.52	Strains of main column bar of Spiral specimen (JA)	110
5.53	Strains of transverse beam bar of Spiral specimen (JA)	110
5.54	Strains of joint transverse bar of Spiral specimen (JA)	111
6.1	Progress of cracking development of each specimen	114
6.2	Relationship between the story shear force and horizontal drift	116
6.3	Strain and stress of bottom beam bar in specimen JL	118
6.4	Strain and stress of bottom beam bar in specimen JM	118
6.5	Strain and stress of bottom beam bar in specimen JS	118
6.6	Strain and stress of bottom beam bar in specimen JB	119
6.7	Strain and stress of beam bar at the middle of joint in each specimen	119
6.8	Enveloped stress, strain of beam bar at the middle of joint	120
6.9	Relationship between pull out crack width and drift ratio	121
6.10	Relationship between joint shear angle and drift ratio	121
6.11	Relationship between the enveloped horizontal shear and drift ratio	121
6.12	Relationship between moment arm ratio and drift ratio	121
6.13	Progress of cracking development of each specimen	124
6.14	Relationship between column shear force and drift ratios	125

LIST OF FIGURES

FIGURE	PAGE
6.15 Strain and stress of bottom beam bar in specimen JM	127
6.16 Strain and stress of bottom beam bar in specimen JB	127
6.17 Strain and stress of bottom beam bar in specimen JD	127
6.18 Strain and stress of bottom beam bar in specimen JP	128
6.19 Relationship between shear angle and drift ratio	128
6.20 Relationship between rotation angle and drift ratio	128
6.21 Relationship between the enveloped horizontal force and story drift	129
6.22 Relationship between pseudo joint shear force and the story shear force	129
6.23 Schematic shear force diagram of each specimen.	131
6.24 Progress of cracking development of each specimen of specimen JB, JS, JM and JL	134
6.25 Relation between column shear force and drift ratio of specimen JB, JS, JM and JL	135
6.26 Relation between the strain of beam bar and drift ratio	137
6.27 Relation between joint shear angle and drift ratio	138
6.28 Relation between column shear envelope and drift ratio	139
6.29 Relation between pseudo joint shear force and drift ratio	139
6.30 Horizontal joint shear (V_{jh}) at the middle of the joint panel	139
6.31 Change in strut geometry after spalling of beam section	140
6.32 Progress of cracking development of specimen JM, JT, JA, JP	143
6.33 Relationship between column shear force and drift ratios of specimen JM, JT, JA, JP	144
6.34 Relationship between strain of beam bar at the left and right joint face and drift ratio of each specimen	146
6.35 Relationship between the local strain of beam bar and drift ratio	147
6.36 Relationship between strain distributions of transverse reinforcing along column and normal strain	148
6.37 Relationship between joint shear angle and drift ratio	149
6.38 Relationship between beam rotation angle and drift ratio	149
6.39 Relationship between column shear envelop and drift ratio	150
6.40 Relationship between pseudo joint shear force and drift ratio	150
7.1 Force and moment act on beam-column joint panel	152
7.2 Stress- strain relation and concrete compressive stress distribution for confined concrete by rectangular hoop.	154
7.3 Mechanism of bond stress transferring	155
7.4 Diagonal main and sub-strut mechanism of interior beam-column joint	156
7.5 The angle of inclination of main and sub-strut stress on interior beam-column joint	157
7.6 Horizontal and Vertical joint strain in normal bond condition	159
7.7 Bond stress-slip model proposed by Eligehausen et al (1983)	160
7.8 Interrelated distribution of reinforcing bar strain and bond stress within joint region	161
7.8 Interaction between joint shear and bond force within interior joint region	162
7.9 Concrete under biaxial stress state	163

LIST OF FIGURES
