

Acknowledgment

First, I would like to express my deepest gratitude to my former adviser Dr. Matthew N. Dailey, and my current adviser Dr. Stanislav S. Makhanov. Were it not for their generous and continuous support, this thesis work has never been possible. Dr. Matthew provided me, as my thesis topic, with an opportunity to dive into simultaneous localization and mapping (SLAM) problem, a rich and fascinating topic of modern computer science. Through working with Dr. Matthew, I learned tremendous amount of wisdom in conducting innovative research and maintaining positive attitudes when I was facing difficulties. Dr. Stanislav gave me pieces of invaluable advice to enhance my research results, and let me constantly consult with him on the course of my academic life.

Grateful acknowledgment is extended to my committee members, Dr. Bunyarit Uyyanonvara and Dr. Toshiaki Kondo. They always gave me great encouragement and opportunities to have fruitful discussions on my progress in research.

I am deeply indebted to Dr. Djitt Laowattana, Director of the Field Robotics Institute of King Mongkut's University of Technology Thonburi. He willingly filled the role of revising this thesis and supplied insightful feedback to me.

A special thanks go to Mr. Nico Hochgeschwender, Mr. Akash Dev Nakarmi, and Mr. Kan Ouivirach. Nico assisted me in developing many important image processing libraries and the core part of SLAM algorithm code. Akash helped me collect experimental data and shared his SIFT point detector utilities that greatly facilitated my camera calibration process. Kan kindly offered me to run my SLAM experiments on his powerful computing system.

I would like to thank all of my friends and colleagues in the Image and Vision Computing Laboratory at the Sirindhorn International Institute of Technology (SIIT) and the Computer Science and Information Management program at the Asian Institute of Technology (AIT). Finally, I am grateful to my parents for their continuous understanding and encouragement to date.
